

# HERE'S WHAT ONE OF OUR CLIENTS HAD TO SAY:

"After running Gamma88 in my 2011 Freightliner (with a DD15 Engine) for over 800,000 miles, I had my truck run on a dynamometer at one million miles. The engine which is rated for 530 HP, reached 563 HP twice on the dynamometer. Also, my DPS filter lasted 1.3 million miles when it usually only lasts between 400,000 and 700,000 miles. I attribute the increase in horsepower and filter longevity to the cleaning and lubrication power of Gamma88. It's a no brainer."

~Greg M.

The science: Gamma88 is formulated with a proprietary blend of high-quality esters. These esters are the main and most important ingredients in Gamma88. Simply put, esters are a class of chemical compounds that are synthesized from relatively pure and simple components. These compounds are stable in heat, provide lubrication and cleaning power, and do not contain the undesirable and unstable impurities found in conventional petroleum-based products. Our two classes of esters, working together ultimately increase your engine's performance.

# CONNECT WITH

**Low Molecular-Weight Esters** remove the dirty deposits formed by the incomplete combustion of fuels. These deposits show up as unburned and partially burned fuel (hard carbon) on the injectors and piston rings and can severely impair engine performance. Removal of these deposits immediately results in less blow-by and greater fuel economy.

**High Molecular-Weight Esters** are designed to survive the fiery combustion process and are absorbed into engine components. This absorption forms a lubricating boundary layer on metal-rubbing surfaces, such as inside cylinders and fuel injectors. The added lubricity reduces engine temperatures and improves fuel economy. This is of particular importance in upper cylinder areas where pistons change direction rapidly and run hot due to a lack of natural lubricity.

## WHY GAMMA 88?

The simple answer is that you should choose **Gamma88** because **Gamma88** works. **Gamma88** WILL reduce your fuel costs, reduce your maintenance costs and reduce harmful emissions. These facts have been proven time after time in laboratory and field tests.

- **Gamma88** is a powerful liquid fuel and oil additive.
- **Gamma88** starts working immediately when it is added to the fuel and crankcase oil of an internal combustion engine.
- **Gamma88** enhances fuel and oils for greater lubricity, enhanced cleansing and more efficient combustion.
- The benefits of using **Gamma88** are reduced fuel use (more MPGs), reduced maintenance costs and fewer harmful emissions.

## HIGHLIGHTS FROM:

### GAMMA88 ENGINE DYNAMOMETER TEST

**Typically Reduces Fuel Costs by 6 to 12%**

**Increases Lubricity by 11%**

**Raises Cetane by 2.5%**

**EPA Registered**

**ASTM Lab Tested for Use in Fuel and Oil**

**99.99976% Clean**

(Ashless upon ignition)

**Ester-Based**

**Nonhazardous**
